DETAILED ACTION***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

Claims 1-7, 10, and 13-19 are rejected under 35 U.S.C. 102(e) as being anticipated by Kurata. The reference to Kurata shows the basic structural and process features of the invention. For example, comparing Figs. 5A-5C of the reference, and the accompanying description in the reference, with independent claims 1 and 13 of the invention, it is seen that Kurata teaches:

forming a lower gate electrode (13) on a gate insulating film (32),

forming an upper gate electrode (34) on the lower gate electrode, where the upper electrode is made of a material with a lower oxidation rate than that of the lower electrode,

forming the gate by patterning the upper and lower films,

forming source/drain regions (36),

and forming oxide film sidewalls (37) by oxidizing the upper and lower gate elements, resulting in the thickness of the sidewall oxide on the lower gate electrode element being larger in the gate length direction than that of the upper gate electrode element (see element (37) in Fig. 5B).

In addition, Kurata uses the same materials and teaches the same relative dimensions claimed in the dependent claims. For example, Kurata describes a SiGe lower gate electrode film (col. 5, l.5), having

a composition ratio of Ge between 0.05 and 0.09 (col. 4, l.56), where the lower gate electrode film contains carbon (col. 4, l. 30), where the upper gate electrode film is Si (col. 3, l.56).

Allowable Subject Matter

Claims 8, 9, 11, 12, 20 and 21 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
